Correction

If SI leads to a collapsed lifter and/or lifter that has come apart including a bent pushrod it is recommended to replace all lifters and lifter guides on the effected bank. At this time it is not necessary to replace the lifter on the opposite bank.

When replacing the lifter and guide please indicated which lifter has failed by marking it's location on the guide for inspection (please do not cover the date code). The parts will be requested back.

Also it is not necessary to replace the oil control solenoid.

Warranty Information

For this repair use the published labor time as called out in SI Labor Time Guide.

GM bulletins are intended for use by professional technicians, NOT a "do-it-yourselfer". They are written to inform these technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Properly trained technicians have the equipment, tools, safety instructions, and know-how to do a job properly and safely. If a condition is described, DO NOT assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See your GM dealer for information on whether your vehicle may benefit from the information.
